

I am a subscriber to the XM Satellite Radio service and very much enjoy the continuity of coverage as I drive coast to coast. As this is a subscriber service, it should be nobody's business what we want to listen to except XM. The traffic and weather coverage of XM allow me to plan my arrival into major metropolitan areas long before I would have "regular" radio coverage. The quality of the signal and programming is outstanding, as it should be for a subscriber service.

Thank you very much,

James Rose
